PROFESSIONAL SUMMARY

Software Engineering student at PUC Minas, Brazil, with hands-on experience designing, architecting, and developing end-to-end software solutions, AI-powered applications, cloud-native platforms, and enterprise automation systems. Passionate about backend engineering, software architecture, artificial intelligence, API integrations, cloud computing, and scalable application development.

Currently working within a Global Cybersecurity Security Operations Center (SOC), where software engineering plays a central role in developing internal platforms, intelligent automation tools, cybersecurity analytics solutions, and system integrations that improve operational efficiency and support data-driven decision-making across global cybersecurity operations.

Experienced in building complete software products—from system architecture, backend development, and frontend implementation to testing and cloud deployment—while integrating AI models, external APIs, cybersecurity platforms, databases, and business intelligence dashboards. Fluent in Portuguese and English (C2 – EF SET Certified), with strong analytical, problem-solving, leadership, and cross-functional collaboration skills developed through working with global and multidisciplinary teams.

PROFESSIONAL EXPERIENCE

Global Cybersecurity Operations | Anglo American

Dec 2025 – Present

Global | Security Operations Center (SOC)

- Developed software automations, API integrations, and data processing solutions on top of existing enterprise cybersecurity platforms, improving operational efficiency, cybersecurity analytics, and security workflows across the Brazilian OT environment.
- Solely designed, architected, developed, tested, deployed, and launched a global cloud-based cybersecurity training platform for interns and apprentices, delivering the complete solution from software architecture to cloud deployment.
- Developed Python-based automation tools that automated repetitive cybersecurity processes, enriched security data, and accelerated investigations, reporting, and operational decision-making.
- Built executive dashboards, Power BI reports, and automated KPI pipelines that consolidated data from multiple cybersecurity platforms into actionable business insights.
- Optimized cybersecurity asset management through automation and data quality improvements, increasing metadata visibility by 15.5% and reducing inaccurate records by 23.4%.
- Assumed responsibility for cybersecurity operations across the Brazilian OT environment, monitoring more than 1,000 security events within five days, eliminating the alert backlog, and establishing sustainable monitoring processes.

Full Stack Software Engineer I | FG Consultoria

Sep 2025 – Present

Remote – Contract

- Led the end-to-end development of the company's internal AI-powered financial and strategic consulting platform, taking ownership of software architecture, backend and frontend development, API integrations, testing, deployment, and continuous product improvements.

- Designed and implemented intelligent features for business restructuring, company valuation, investment risk analysis, and cost of capital calculations, leveraging AI to automate complex analytical workflows and enhance decision-making.
- Integrated more than 10 external APIs, enabling seamless data aggregation, intelligent data processing, and automated report generation across multiple business domains.
- Developed scalable full-stack applications focused on performance, maintainability, and software engineering best practices.
- Led the architecture, development, deployment, and maintenance of the **FG Consultoria** corporate website, delivering a modern, responsive, and high-performance web application.
- Collaborated with clients and business stakeholders to gather requirements, design technical solutions, and translate business needs into scalable software products.
- Provided technology consulting by identifying automation opportunities, optimizing business processes, and implementing AI-driven solutions to improve productivity and operational efficiency.
- Applied software engineering best practices, including clean architecture, RESTful API design, Git version control, and code reviews to ensure high-quality and maintainable software.
- **Tech Stack:** Java, Spring Boot, Python, JavaScript, TypeScript, React, React Router, HTML5, CSS3, Bootstrap, SQL, PostgreSQL, MySQL, REST APIs, JSON, JWT, OAuth 2.0, Git/GitHub, Docker, AI Integration, Prompt Engineering, Cloud Deployment, Power BI, and Microsoft Excel.

Teaching Assistant – Web Interface Development | PUC Minas

Aug 2025 – Dec 2025

Belo Horizonte, Brazil - Temporary

- Mentored 20+ students in Java, Spring Boot, HTML, CSS, JavaScript, responsive web development, and fundamental software engineering concepts through practical projects and laboratory sessions.
- Reviewed code, supported debugging activities, and provided technical guidance on application structure, interface implementation, and problem-solving.
- Delivered individualized feedback on web development assignments, helping students improve code quality, usability, and understanding of frontend development principles.

Team Manager | Clube Chalezinho

Oct 2023 – June 2026

Hybrid

- Led a 15-member team recognized as the top-performing team for nine consecutive months through effective task distribution, performance management, and continuous process optimization.
- Developed operational dashboards and performance reports that improved decision-making, workload visibility, and team performance monitoring.
- Managed daily operations, resolved operational challenges, and fostered a collaborative, results-driven team culture.
- Planned and executed events, managing client communications, negotiations, and customer experience throughout the event lifecycle.
- Supported sales initiatives and coordinated cross-functional efforts to deliver successful outcomes.

EDUCATION

Bachelor's Degree in Software Engineering | PUC Minas

2024 – 2028

Belo Horizonte, Brazil | In Progress

High School Diploma | Colégio Santo Agostinho (Central Unit)

Completed 2023

Belo Horizonte, Brazil

SELECTED SOFTWARE PROJECTS

- **Outstanding Work Certificate – Computer Engineering Program, PUC Minas** – Designed, developed, and programmed an integrated robotics system featuring two autonomous robots capable of real-time interaction through a custom-built arcade controller. Developed embedded software, electronic circuits, communication protocols, and control logic, demonstrating expertise in embedded systems, robotics, electronics, and software engineering.
- **AI-Powered Financial & Strategic Consulting Automation Platform** – Architected and developed an end-to-end enterprise software platform that automates strategic consulting workflows, including corporate restructuring, business valuation, investment risk analysis, and cost of capital calculations. Integrated more than 10 external APIs and implemented AI-powered capabilities that generate intelligent recommendations, automate financial analyses, and continuously adapt to project-specific data, significantly improving productivity and decision-making.
- **Global Cybersecurity Training Platform** – Solely designed, architected, developed, tested, deployed, and launched a global cloud-based cybersecurity training platform for interns and apprentices. Built the complete solution end-to-end—from software architecture, backend and frontend development to cloud deployment—featuring gamified learning, interactive quizzes, challenge-based exercises, and AI-assisted educational capabilities to standardize cybersecurity awareness across multiple global regions.
- **Cybersecurity Automation & Integration Solutions** – Designed and developed Python-based automation tools, API integrations, and data processing solutions that extend enterprise cybersecurity platforms by automating repetitive workflows, enriching security data, consolidating information from multiple sources, and accelerating cybersecurity investigations, reporting, and operational decision-making.
- **Cybersecurity Data Analytics & Reporting Solutions** – Developed automated dashboards, executive reporting solutions, and data analytics pipelines that consolidate information from multiple cybersecurity platforms into actionable insights. Built KPI dashboards and automated reporting workflows using Power BI and data processing techniques to improve operational visibility, asset intelligence, and executive decision-making.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, JavaScript, TypeScript, SQL, C, HTML, CSS
- **Software Engineering:** Software Architecture, Backend Development, Full-Stack Development, Object-Oriented Programming (OOP), REST APIs, API Design, API Integration, Software Automation, Software Testing, System Design, Git/GitHub
- **Frameworks & Technologies:** Spring Boot, PostgreSQL, MySQL, Bootstrap, JSON, JWT, OAuth 2.0, Power BI, Microsoft Excel
- **Artificial Intelligence:** AI-Powered Applications, AI Integration, Prompt Engineering, Intelligent Automation, AI-Assisted Development
- **Cloud & Data:** Cloud Deployment, Data Processing, Data Analysis, Dashboard Development, KPI Development, Business Intelligence
- **Cybersecurity:** Claroty, CrowdStrike, Qualys, Microsoft Sentinel, Google SecOps, OT/ICS Security, SIEM, SOC Operations, Vulnerability Assessment, Threat Detection & Response, Incident Analysis, Active Directory, Cryptography, Network Security
- **Professional Skills:** Analytical Problem-Solving, Leadership, Cross-Functional Collaboration, Cross-Cultural Communication, Stakeholder Management, Decision-Making, Technical Communication

LANGUAGES

- Portuguese – Native
- English – Fluent (C2 Proficient – EF SET Certified)
- Spanish – Basic
